

AIR **EXPERT**

air springs

CATALOGUE 2010

PRODUCT PARTS

1. Top Plate
2. Air Inlet
3. Bolts or Blind Nuts
4. Bumper
5. Rolling Lobe (Bellow)
6. Bottom Bowl
7. Piston (Metal or Plastic)
8. Convoluted Rolling Lobe

INSTALLATION GUIDELINES

Removing the used air spring from the vehicle

1. Jack up the vehicle securely as high as possible. Make sure that, it can not fall of it's supports.
2. Let the air out of the air spring system.
3. Remove the used & old air spring from the vehicle
4. For conical air springs, the narrow end should be placed on the piston part.

Fitting a new Rolling lobe air spring without metal parts

1	Clean the bead seats on the clamping plate and the piston. Check that the mounting equipment is free or burr and is not corroded. Apply a soap solution or an approved fitting lubricant (Do NOT use Grease !) to the bead seat of the piston.	 A1
2	Compress the air spring with the hand while pushing it below the upper bead.	 A2
3	Fix the lower bead to its seat on the piston and the upper bead to its seat on the clamping plate. Ensure that, the axle is completely sprung out.	 A3
4	Pressurise the air spring so that its beads fit correctly between the plate and piston. The beads should snap into place. Place the compressed air spring between the piston and the clamping plate.	 A4
5	1. When you lower the vehicle, the air spring will automatically roll down the piston. The air spring is now fitted.	 A5

INSTALLATION GUIDELINES

Fitting a new Rolling lobe air spring with metal parts

The complete air springs are usually supplied with bolts and threads which attach the complete assembly to the vehicle.

The piston and the bottom clamping plate should be cleaned if the piston is to be re-used.

1	Fit the air spring to the chassis with top plate. Press the bottom bead into an oval shape and push the bottom clamping plate through.	 A1
2	Place the piston and bottom plate as they take place in the same direction with the holes on the axles and then push the plate into the holes of piston	 A2
3	Bolt piston to the plate tightly and make sure it does not twist.	 A3
4	Fit piston on the axle of the vehicle, inflate the air spring and lower the vehicle. The Rolling lobe is now fitted and will automatically roll down the piston.	 A4
5	MD 1813-AK 	

CAUSES of FAILURE & PREVENT THEM

OVEREXTENSION

Cause of Failure :

The air spring is operated outside

the maximum rebound range as a result of unrestrained (missing end stop)

or excessive axle travel (defective/improperly adjusted height

levelling system or wrong air spring).

The abuse may result in separation of the bellows from upper or lower mounting parts.

Appearance or condition :

- Bead plate convex, especially around blind nuts or studs
- Rubber bellows separated from bead plate
- Leaking at blind nuts or studs
- Leaking at end closure (reversible sleeve)
- Loose girdle hoop on convoluted style

Possible Causes :

- Defective levelling valve
- Ride position too high
- Defective upper stop (lift)
- Wrong air spring (too short)

Recommendation :

Check and/or adjust height levelling system, shocks, end stops and air spring specifications to prevent air spring travel of exceeding the max. recommended height.

ABRASION

Cause of Failure :

Bellows in contact with other components

(e.g. defective parts) of the vehicle or foreign objects (e.g. dirt, rocks) that accumulate at the piston/Rolling part of the bellow. They may rub through the bellows during spring deflection.

Appearance or condition :

- Hole rubbed into side of bellows
- Hole in bellows area that rolls over piston (reversible sleeve style)

Possible Causes :

- Structural interference, such as broken shock, loose air line, misalignment, worn bushings
- No air pressure (reversible sleeve style)
- Foreign material (sand, rocks, etc)
- Wrong air spring

Recommendation :

- Avoid contact between bellows and any other part of the vehicle.
- Check air springs periodically / remove foreign objects from rolling part of the bellows.
(Do NOT use solvents for washing)

OVERLOAD

Cause of Failure :

When overloading the vehicle the height levelling valve will open to adjust vehicle height by increasing the pressure inside the air spring up to max. system pressure available. The improper usage of the air spring system outside the recommended pressure range may cause deformation or damage to the bellows, piston and/or bead plate.

Recommendation :

Avoid overloading of the vehicle.
Check air spring specifications for maximum load capacity.

CONTAMINATION (CHEMICALS)

Cause of Failure :

Air spring bellows are NOT resistant to solvents, hydraulic oils nor lubricants. A permanent exposure to chemicals will cause premature failure of air spring system.

Recommendation :

- Check the air spring system periodically.
- Avoid too much oil in the air supply lines.
- Remove lubricants from the bellows.
- Do NOT use mineral oil based cleaners.
- Do NOT use any solvents.

WARNING !

Do not inflate unless fully secured in the suspension system of the vehicle or in some other appropriate structure. Pressure may exceed 100 psi / 7 bar.

Otherwise there is a danger of injury!

Working Temperature: -40 'C to 70 'C / -40 'F to 158 'F

Please take into consideration warnings on products.

Technical drawings of two types of manhole covers:

- 160037:** A side view of a manhole cover with a top diameter of $\varnothing 300$ and a central opening diameter of $\varnothing 198$. The total height is 380, and the height of the central opening is 146. The cover is secured with two bolts. The mounting height is specified as Hmax: 450 / Hmin: 255.
- 210007:** A top view of a manhole cover with an outer diameter of $\varnothing 227$ and a central opening diameter of 157.5. It features two mounting holes, each with a diameter of $\varnothing 12$ (labeled M12). The cover is secured with two bolts, each with a diameter of M20x1.5.

Technical drawings of two components:

- 210007:** A circular component with a top view showing a diameter of $\varnothing 300$ and a bottom view showing a diameter of $\varnothing 227$. The top view also shows a central hole with a diameter of $\varnothing 198$. The bottom view shows two mounting holes with diameters of $M12$ and $M20 \times 1.5$. The distance between the mounting holes is 157.5 . The overall height is $H_{max}: 450 / H_{min}: 255$.
- 220044:** A circular component with a top view showing a diameter of $\varnothing 260$ and a bottom view showing a diameter of $\varnothing 260$. The top view shows a central hole with a diameter of $\varnothing 198$. The bottom view shows two mounting holes with diameters of $M12-6H$ and $M12$. The distance between the mounting holes is 141 . The overall height is $H_{max}: 450 / H_{min}: 255$.
